## CPC Continues to Enhance Polypropylene Plastic Coupling Series

*New configurations make it simple to incorporate couplings into OEM equipment*

**St. Paul, Minn. – January 21, 2016 – [CPC \(Colder Products Company\)](#)**, the leading provider of quick disconnect couplings and fittings for plastic tubing, announces the further expansion of its [PMC12 Series](#) quick disconnect couplings with panel mount options that allow OEMs to easily integrate flexible tubing connections directly into their devices or equipment. The PMC12 Series and its panel mount inserts are available in polypropylene for enhanced chemical resistance and are gamma sterilizable.

“The new panel mount versions of the PMC12 couplings offer a wide variety of terminations including hose barb and ferruleless polytube fitting (PTF). Combined with the valved and non-valved panel mount configurations, the PMC12 Series is able to meet the unique fluid handling needs of each customer,” says Tim Jacobson, product manager for industrial markets at CPC.

“Our panel mount terminations reliably attach to tubing internal to a company’s equipment or device, allowing users to easily connect to an external tube set.”

Because of their small, compact form factor, CPC's PMC12 plastic quick disconnect couplings with panel mounts are used for applications within In Vitro Diagnostics (IVD) systems including those handling reagents and buffers. They also operate reliably in printing and ink handling applications.

For more information about how your fluid handling application will benefit from integrating panel mount inserts, or any of the other 10,000+ innovative connection solutions CPC offers, visit online at [cpcworldwide.com](http://cpcworldwide.com).
