## **Colder Products Company Introduces Easy-to-Use AseptiQuik™ Connectors for Single-Use Processing at Interphex**

**St. Paul, Minn. – April 21, 2010** – Today at Interphex (booth #1572), Colder Products Company introduced a new sterile connector for biopharmaceutical manufacturers seeking a robust sterile connector for single-use processing. AseptiQuik® Connectors are a reliable, easy-to-use solution and the connector's intuitive Click-Pull-Twist® design reduces complexity and risk of operator error.

AseptiQuik Connectors were developed in response to customer requests for a robust sterile connector that is truly easy to use, said John Boehm, business unit manager, bioprocessing, Colder Products Company. Our robust connectors provide reliable performance while eliminating the need for additional clamps, fixtures or tube welders.

AseptiQuik Connectors deliver quick, easy and reliable connections for manufacturers using single-use systems and enable sterile media transfer, even in non-sterile environments. The intuitive three-step process enables operators to quickly connect two single-use assemblies: an audible CLICK confirms the initial connection, PULL tabs allow simultaneous membrane removal and a simple TWIST of the integrated lock ring provides secure final assembly.

(more)

Extensive validation testing completed on post gamma and autoclave sterilized connectors confirms that external organisms are prevented from entering the flow path before, during or after connection. Testing includes functional performance, biocompatibility and three types of microbial ingress tests.

Whether in seed train applications, suite-to-suite transfer or filling operations, manufacturers can protect their valuable product with sterile connection technology. AseptiQuik connectors from Colder Products Company provide the security and reliability expected from the leader in single-use connectors.
